1. Best New Features of macOS Big Sur

macOS Big Sur is now out to all supported devices. Here's the full list of macOS Big Sur compatible Macs:

- MacBook (2015 and later)
- MacBook Air (2013 and later)
- MacBook Pro (Late 2013 and later)
- Mac mini (2014 and later)
- Mac Pro (2013 and later)
- iMac (2014 and later)
- iMac Pro (all models)

macOS Big Sur brings a refreshing design to Mac's interface, plus several major improvements to Safari, Messages, Maps, Battery, Widgets, Privacy, and more. Here are our top pick features in macOS Big Sur.

Refreshed Design

The design of macOS Big Sur is incredible. The whole OS feels overhauled. Everything, down to updated menu bar, floating Dock, new icons for apps, lighter window appearance, redesigned sheets, new and updated sounds, full-height sidebars and new symbols throughout macOS, everything is feeling new and much more pleasing to use. As you'll notice, Big Sur adopts a new look that closely resembles iOS icons. Most importantly, launching apps on your Mac are nearly instantaneous, just like the iPhone and iPad do.

So new dock icons have been redesigned to appear more consistent across the Apple ecosystem, while still retaining their Mac personality. The new Control Center gives users access to controls right from their desktop. And redesigned widgets offer users relevant information at a glance.

All-new Safari

Apple says macOS Big Sur brings the biggest update to Safari since its original launch in 2003, making it faster (almost 2x more responsive), more personal, and more private than ever. It brings a customizable start page, improved performance, improved power efficiency, website previews, built-in translation, and privacy report.

Now Safari features a customizable start page for a more personalized browsing experience, such as add a personal background image, reading list, frequently visited, iCloud Tabs, and more. And with built-in translation, Safari can translate entire web pages effortlessly by click View on the menu > Translate > Translate to English/Spanish/French/German/Russian/Brazilian/Portuguese. Besides, an all-new extensions category on the App Store makes it easier to discover great extensions. Finally, Safari also has a new innovative Privacy Report to prevent from profiling users on the web.

Upgraded Messages

The updated Messages app for macOS Big Sur gives you all the tools you need to stay in control of the conversation, such as Inline replies, trending images, memoji stickers, and pin conversations, etc. This time using the Messages app on Mac is an even more fun and engaging experience.

Users can create and customize Memoji on the Mac, and share Memoji stickers that match their mood or personality. With the ability to pin conversations in Messages, users can easily stay in touch with family, friends, and colleagues. With a new photo picker and #images, users can share images, GIFs, and videos faster and easier. And inline replies allow you to reply directly to a specific message in a group conversation.

Redesigned Maps

Apple said that the new version of Maps started with the iOS version, which was converted to the Mac using Mac Catalyst. The redesigned Maps offers better ways to find your way, including useful features like guides, look around, indoor maps, cycling routes, electric vehicle routing, and more. With Guides, you can discover the best places to eat, shop, and explore in cities around the world as well as create custom guides for your favorite places and share with friends and family. Look Around provides an interactive 3D experience that lets you pan 360 degrees, and new indoor maps allow you to browse detailed indoor maps of major airports and shopping centers around the world.

New Control Center & Notification Center

The updated Control Center is similar to the Control Center available on iOS devices. It's easily accessible by clicking the two toggles in the Menu Bar, so that you can get quick access to settings for Wi-Fi, Bluetooth, brightness, Do Not Disturb, sound, and current media playback.

And the redesigned Notification Center comes with the notable addition of widgets. Just tap the time on the top-right corner and you'll find the new widget pane. Tap Edit Widgets to move them around, remove them, or add new ones in various sizes.

2. Best Solution to Remove Kindle DRM on macOS Big Sur

macOS Big Sur is a massive update for the Mac, containing tons of new features and upgrades. However, these new changes cause all current eBook DRM Removal unable to remove Kindle DRM on macOS Big Sur any more.
