

How to Convert Any eBook to An Audiobook

I read a lot of articles and ebooks every day, but sometimes, I prefer listening to them instead. And I always prefer Audiobooks over physical ones, since they are faster, put less strain on the eyes; and most importantly, unlike reading, you can listen to audiobooks anywhere you want, like while cooking or during the commute, etc. However, many books don't have a audio version yet. So there is a new workaround I found. Now I convert ebooks to Audiobooks using a text-to-speech tool. And here's the guide about how to turn any ebook into an audiobook on Mac/Windows/Android/iOS.

1. How to turn ebook into an audiobook on Mac

Every Mac computers come with a built-in TTS (text to speech), which you can use to read out any text and epub book on your screen. Simply select the text > Right-click > More > Start Speaking.

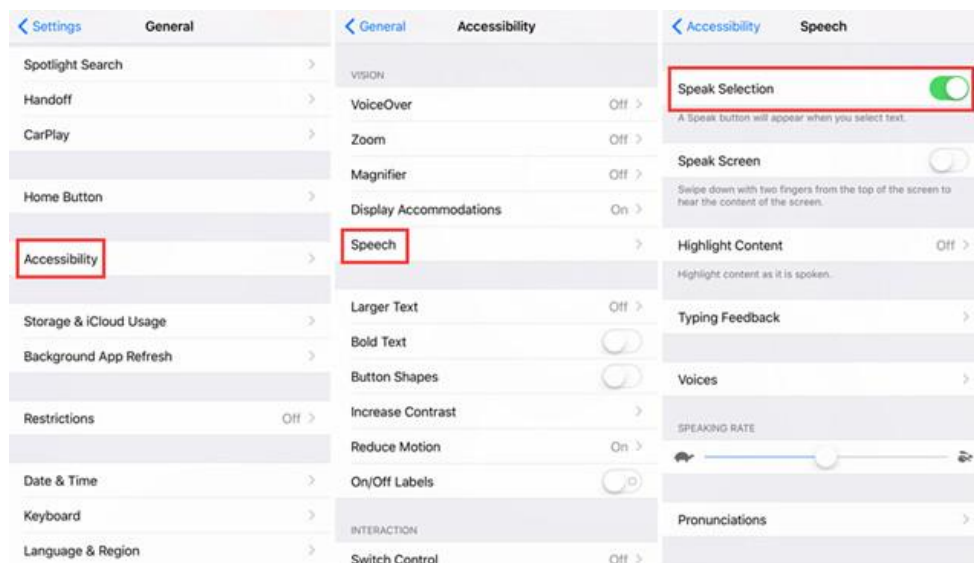

2. How to turn ebook into an audiobook on Windows

Windows do not have inbuilt TTS like MAC, so you will have to download a third-party TTS app. [Natural reader](#) is one of the best text-to-speech web application with high quality premium voices out there. It's available for both MAC and PC, and has all the useful features you'll ever need — like it's compatible with any written text such as MS Word, PDF files, non-DRM epub eBooks, or webpages and convert them into natural sounding speech.

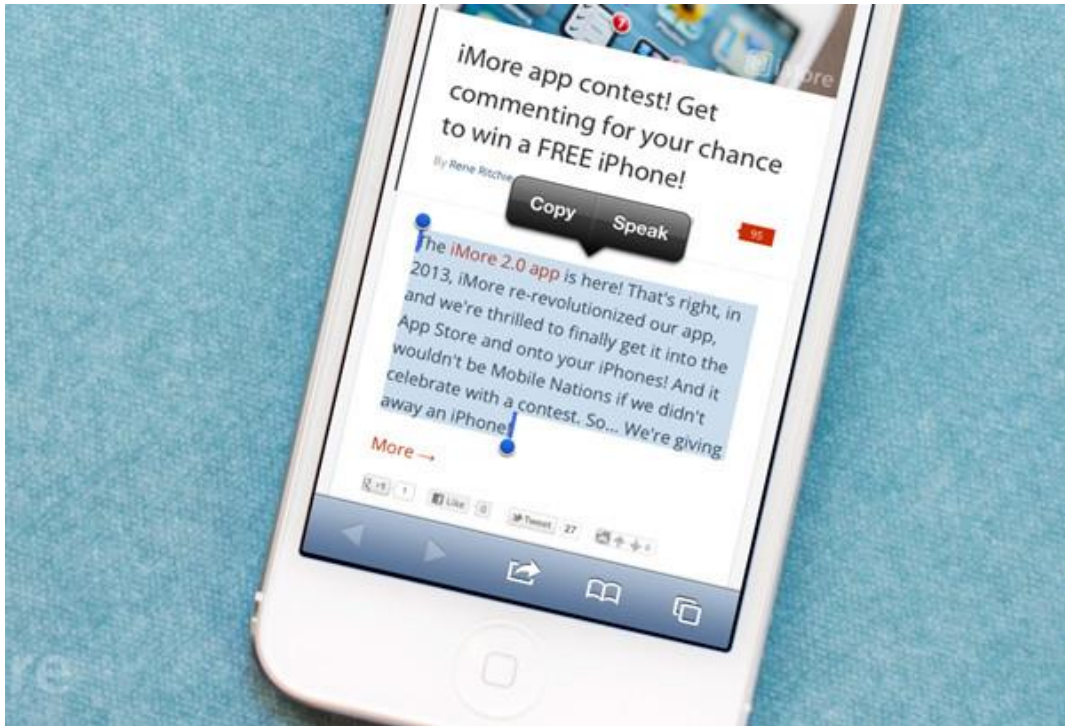

3. How to turn ebook into an audiobook on iOS Devices

Like Mac, iOS also has the TTS built-in. But you have to enable it first. To do that, go to Settings > General > Accessibility > Speech. Here, you'll see two options — Speak Selection and Speak Screen. The first one will speak the highlighted text and the second one will read whatever is on the screen.

Once enabled, select text on any app on your iOS device and then tap on speak option.

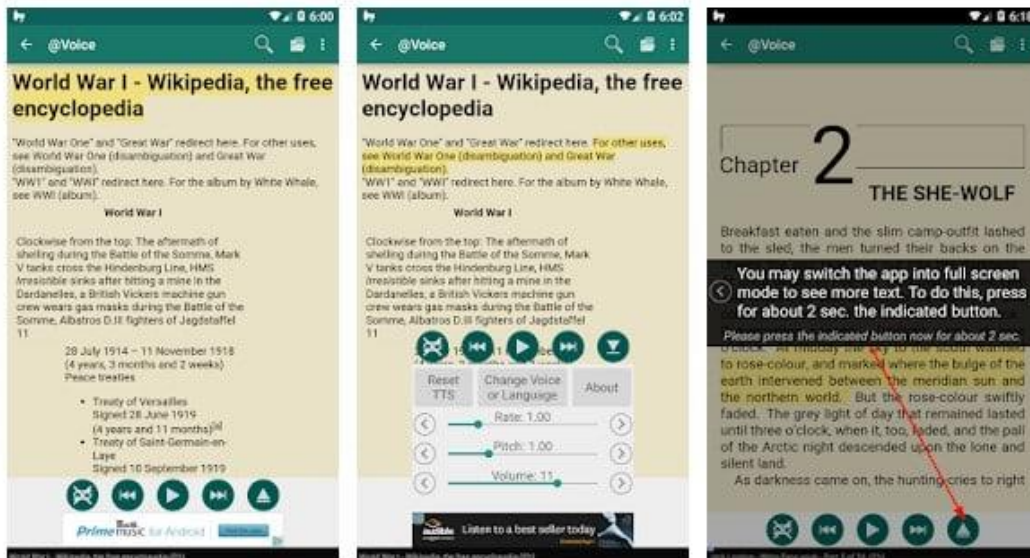

4. How to turn ebook into an audiobook on Android Devices

Like iOS, Android also has an inbuilt TTS, but it only works if the apps have this feature integrated. Like in Google Books, you can use the TTS. However, you can not select text and make it speak out like we did in iOS. But, there is a simple solution. I found a good text-to-speech app after trying a handful of them, I finally went with [Voice Aloud Reader](#). Some of its unique features are

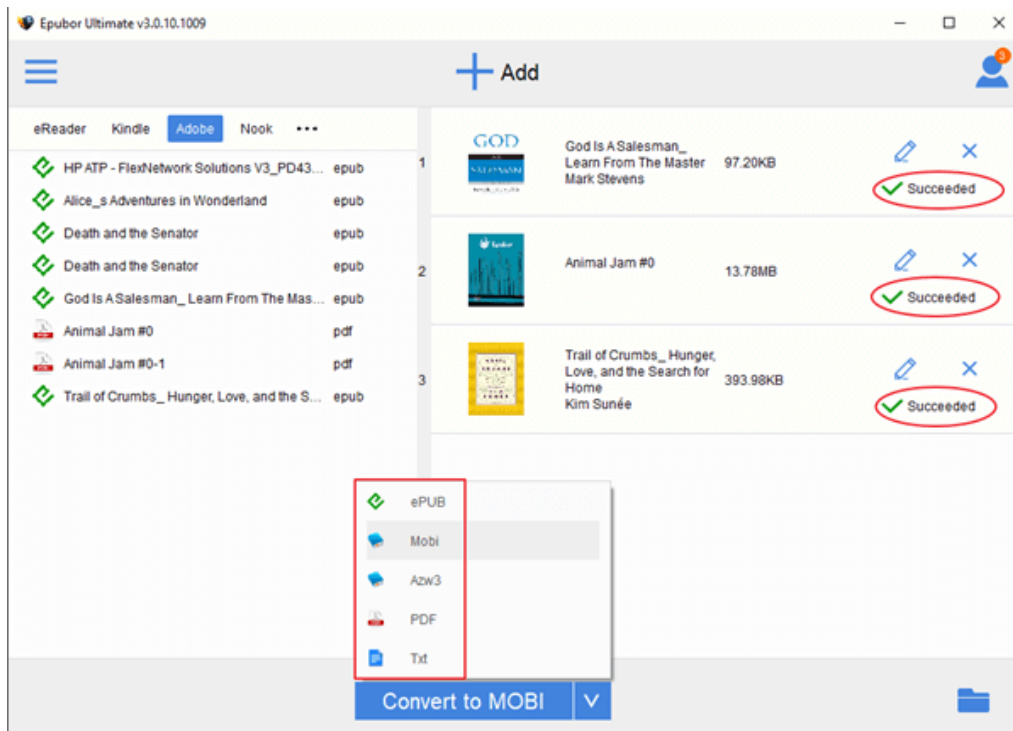

—

- Support almost every text format, like — Open Text, PDF, DOC, RTF, HTML, EPUB ebooks.
- More natural voice compared to others TTS apps I tried.
- Listen to the spoken articles or record it as Wav file.
